

Acella Construction Completes 28,000 SF Retail Shell in Westerly, RI

Storefront to host five tenants

NORWELL, Mass. (June XX, 2008)—Acella Construction Corporation, one of New England’s leading construction services firms, specializing in construction management, general contracting, design-build, pre-construction and program management services, today announced that it has completed the construction of a 28,000-square-foot retail shell in Westerly, RI. Acella has also been selected to build-out several of the retail spaces.

The Westerly Crossing Retail Shell was completed with an aggressive six-month schedule. The complex foundations were completed in the winter, including paving and landscaping to be coordinated with adjacent projects. The 28,000-square-foot new building includes structural steel, masonry façade, an exterior insulation finishing system (EIFS) and an aluminum storefront, which is currently planned for five tenants.

“Our six-month schedule proved to be a challenge that our team was up for,” said David Dirubbo, president of Acella Construction. “With construction continuing on throughout the winter we made sure that our project stayed on schedule and focused on optimal results.”

Acella worked in conjunction with design team RGB Architecture, Engineering and Design, a Providence, RI-based firm.
